	The State recently made changes to the Lead and Copper Rule which now requires municipalities or local water suppliers to remove lead from the water distribution system even if the lead is found to be on private property. In St. Clair Shores there are homes that the private service line connecting the house to the public water supply is made of

Project Description	lead material. The City has water connection (tap) cards from when the homes were originally connected to the City water distribution system. The City currently has a total of 25,303 water connection customers. Of those, there are approximately 515 that are expected to be made of lead material. That is approximately 2% of our water customers. The project was approved in January of 2020, however, because of COVID-19, the project was halted and started up slowly in November 2020. In the FY2022 budget, the Council agreed to allocate \$1,000,000 of our SLFRF funds to continue to replace the residential lead lines.
